Dear TELUS Digital AI Sourcing Team,

I am writing to express my interest in the Online Data Analyst role with TELUS Digital. The opportunity to contribute to improving the quality and accuracy of digital map data is particularly appealing to me, as it combines detailed research, data evaluation, and independent analytical work.

I hold a Bachelor of Computer Science from the University of New Brunswick and have several years of experience analyzing and validating complex datasets within a production environment. In my role as a Software Systems Developer and Process Analyst at BWS Manufacturing, I regularly worked with operational data across procurement, production, inventory, and sales systems. Much of my work involved researching discrepancies in datasets, verifying information across multiple sources, and building analytical tools that improved data visibility and accuracy for internal teams.

Through this experience, I developed strong attention to detail and a structured approach to evaluating data quality. I am comfortable working with detailed guidelines, conducting online research, and independently assessing the relevance and accuracy of information. These skills align closely with the responsibilities of the Online Data Analyst role, where careful evaluation and consistency are essential.

Having lived in Canada for many years and being based in New Brunswick, I am familiar with local geography, culture, news, and current events. I am fluent in English and have intermediate professional proficiency in French, allowing me to interpret and evaluate content in both languages.

I am particularly interested in this role because it offers the opportunity to apply analytical and research skills in a flexible, remote environment while contributing to the improvement of widely used digital mapping technologies. I would welcome the opportunity to participate in the assessment process and demonstrate my ability to perform the research and evaluation tasks required for this position.

Thank you for your time and consideration. I look forward to the opportunity to contribute to TELUS Digital's data quality initiatives.

Sincerely,
Avery Briggs

Professional Summary

Data analyst and systems developer with extensive experience researching, validating, and analyzing complex datasets to improve operational accuracy and decision making. Skilled in web-based research, data verification, and identifying inconsistencies across structured information sources. Adept at working independently with detailed guidelines to evaluate information quality and relevance. Experienced with large datasets, analytics dashboards, and data quality improvement initiatives.

Experience

Software Systems Developer | Process Analyst

BWS Manufacturing Ltd. | Centreville, N.B. (Jan 2021 – Feb 2026)

Developed internal software systems and software development tools supporting operational workflows across Sales, Procurement, Production, and Scheduling within a small technical team in a manufacturing environment.

Key Contributions

- Researched and validated operational datasets to ensure accuracy across inventory, procurement, and manufacturing systems.
- Developed analytical queries and reporting tools enabling cross-department analysis of operational data including inventory, production, purchasing, and sales metrics. Framed and presented using modern dashboard interfaces.
- Conducted structured data analysis using SQL, Python, and reporting tools to identify trends and anomalies.
- Built tools that improved data visibility and reduced reconciliation errors across multiple departments by verifying accuracy of data through cross-referencing sources and historical records.
- Designed a warehouse data visualization system mapping inventory locations onto spatial layouts to improve operational visibility and planning.
- Developed tools using OCR techniques to extract structured data from legacy PDF documents, enabling automated reporting and analysis of previously inaccessible operational records.
- Refactored legacy Microsoft Access applications by consolidating duplicated VBA logic into reusable shared modules, eliminating 3–5 smaller databases and improving maintainability of the primary operational system.
- Built an administrative time-tracking interface integrating live ShopClock data, allowing supervisors to review, adjust, and approve employee shift records before payroll submission, improving visibility and coordination across multiple departments.
- Developed internal analytical tools supporting data validation, reporting, and operational data analysis.
- Provided technical troubleshooting and support across hardware systems, network devices, ERP integrations, and vendor-managed services.

Notable Projects:

- IT Request and Inventory Ticketing System. Built from scratch using SQL and Access.
- Streamlit dashboards for sales margins and inventory analysis including inputs and reporting.
- 3D warehouse visualization using Plotly, demonstrating inventory bottlenecks and improving transparency.
- PDF parsing of legacy reports. Performed using Python and modules: Pdfplumber, Streamlit, and Pytesseract.
- Yellow Tag system to automatically flag, record, and report missed parts when picked for production. Offers a variance reconciliation opportunity earlier in the production pipeline, highlighting common trends.

Technologies used:

- Python, SQL Server, Streamlit, Pandas, Plotly, Pytesseract, Reportlab, CustomTkinter, Microsoft Access, VBA, Syspro8 ERP, ShopClock, NeWare Security

Other Job Experience:

- Basketball Referee – CBOC – Fredericton, NB – Oct 2013 – Mar 2020
- Kitchen Staff – FMI – Fredericton, NB, -- May 2015 – Sept 2017
- Farm Hand – Hunter Brother’s Farm Market – Florenceville, NB, -- Jun 2011 – Aug 2013

Education

Bachelor of Computer Science

UNB – Fredericton N.B. (May 2020)

- Specialization: Software Systems.
- Recipient of Governor Thomas Carleton Entry Scholarship.

Skills

- **Languages**: English (native), French (Intermediate professional proficiency)
- **Programming**: Python, SQL, VBA, Java
- **Frameworks / Libraries**: Streamlit, Pandas, Plotly, CustomTkinter, Pdfplumber, Pytesseract
- **Learning**: TypeScript, C#, .NET, other modern web frameworks
- **Databases**: Microsoft SQL Server, Microsoft Access
- **APIs**: NHL Stats API, IMDB API, Fitbit API
- **Tools:** Git, Syspro ERP, ShopClock
- **Other**: Strong cross-team communication and collaboration. Self-directed problem solving and rapid learning.

Awards & Activities

- Finalist (Top 12) - Kaspersky Academy Partner's Summit (KAPS) Lisbon, Portugal (December 2019).
- Certified intermediate plus in the French oral proficiency exam (June 2013).
- UNB dormitory Orientation Committee (September 2014) & Social Representative (September 2014 – April 2015).
- UNB Relay for Life steering committee logistics team (September 2013 – February 2014).

Hobbies

3D printing and hardware projects, sports analytics software, recreational athletics (cycling, kayaking, basketball officiating)

Projects

- NHL data analysis dashboard displaying real-time game data and standings using the NHL Stats API.
- STL file generation for automating the creation of strings of text using custom fonts and other parameters. Uses a Solid2 to generate files, and Streamlit interface to model and tweak them.
- Minesweeper Android mobile application, built using Java and Android Studio.
- Image editing Android application taking advantage of the Gestures library to offer a unique interface for tuning photos.
- Traffic simulation engine using Pygame. Mimics some elements from Cities Skylines traffic patterns.
- COVID-19 interaction simulator built with JavaFX modeling contagion spread in configurable populations.
