Dear Hiring Manager,

I am writing to express my interest in the Freelance Microsoft Access Database Developer position at Access DB Experts.

Over the past five years, I have worked extensively with Microsoft Access developing database applications that support operational and reporting workflows in a manufacturing environment. My experience includes designing relational database structures, building forms and reports, writing VBA automation, and integrating Access applications with SQL Server data sources.

In my previous role, I designed and maintained several internal database systems used for operational tracking and reporting. These tools improved data visibility, reduced manual reporting tasks, and supported decision-making across multiple departments. My work regularly involved gathering requirements from internal stakeholders, designing database structures, implementing features using Access and VBA, and documenting systems for ongoing support.

In addition to Access development, I have experience working with SQL Server and Python for data automation and reporting. This broader background helps me design database systems that are maintainable, scalable, and well integrated with other tools.

I am comfortable working remotely, managing my own time, and collaborating with teams and clients to translate business needs into practical database solutions. The freelance and project-based nature of this role is particularly appealing to me, and I would welcome the opportunity to contribute to your projects.

Thank you for considering my application. I would be happy to discuss how my experience with Access development and database systems could support your team.

Sincerely,
Avery Briggs
