Dear Hiring Manager at King Street Technologies,

I'm writing to express my interest in the Database Analyst (DBA) role at King Street Technologies. With nearly five years of experience developing internal tools and managing SQL-backed systems in a dynamic manufacturing environment, I bring a strong programming foundation, intuitive problem-solving skills, and a deep understanding of how critical data systems are to organizational efficiency.

At my current role with a manufacturing company, I've worked extensively with MS SQL Server 2008, building and maintaining data pipelines, automating reports, and developing custom tools using Python (Streamlit, Tkinter) and MS Access. While my title has leaned toward software development, I've consistently operated at the intersection of data, infrastructure, and user operations—ensuring information is available, secure, and useful for decision-making across teams.

What I may lack in formal DBA credentials, I make up for in real-world experience and adaptability. I've designed tools that support production scheduling, implemented internal IT ticketing systems with SQL backends, and optimized queries to improve performance in legacy systems. My approach to problem-solving is hands-on, collaborative, and informed by a strong programming intuition developed through both academic training and self-directed learning. I'm actively expanding my knowledge of database administration practices, including modern SQL Server features, data security, and indexing strategies.

I'm drawn to King Street Technologies for its reputation as a flexible, solutions-focused firm, and for the opportunity to contribute in a hybrid or remote setting. I'm confident that I can quickly adapt to your systems, add immediate value, and continue growing into more advanced DBA responsibilities while bringing the perspective of a developer who understands how data is used on the ground.

Thank you for your time and consideration. I would welcome the chance to further discuss how my experience and growth mindset can support your team.

Sincerely
Avery Briggs
