Dear Hiring Team,

I am writing to express my interest in the Automation Engineer position at Ace Venture Consulting. With a Bachelor of Computer Science from the University of New Brunswick and several years of experience building internal software systems and automation tools in a production environment, I am excited by the opportunity to apply my experience in automation, APIs, and data-driven systems to a dedicated test automation role.

In my role as a Process Analyst and Software Systems Developer at BWS Manufacturing, I designed and developed internal applications that automated operational workflows and integrated data across departments including Sales, Procurement, Production, and Scheduling. Much of my work focused on developing Python-based systems, building SQL-driven data pipelines, and creating tools that validated and processed operational data used daily by technical and operational teams.

Working within a small technical environment required a high degree of autonomy and full lifecycle ownership of projects. I regularly analyzed operational challenges, designed technical solutions, and implemented systems that improved data reliability, automated manual processes, and provided visibility into complex operational datasets. Many of these projects involved integrating APIs, validating structured data, and debugging multi-system workflows—skills that translate naturally to automation engineering and backend API testing.

I am particularly interested in this opportunity because it would allow me to focus more directly on automation frameworks, API validation, and quality assurance practices within a collaborative engineering environment. While my recent development work has primarily been in Python-based systems, I have a strong foundation in Java and am actively expanding my skills across additional automation and testing technologies.

I enjoy working on practical engineering problems, building reliable tools, and continuously learning new technologies. I would welcome the opportunity to contribute my experience in automation, systems development, and debugging to Ace Venture Consulting while continuing to grow as an automation engineer.

Thank you for your time and consideration. I would welcome the opportunity to further discuss how my experience building automation systems and data-driven applications could contribute to your team.

Sincerely,
Avery Briggs
