Dear Hiring Team,

I am writing to express my interest in the Software Developer position at Helm Operations. With a Bachelor of Computer Science from the University of New Brunswick and several years of experience designing internal software systems and automation tools, I am excited by the opportunity to contribute to a team building mission-critical software used across global maritime operations.

In my role as a Process Analyst and Software Systems Developer at BWS Manufacturing, I designed and developed internal applications supporting Sales, Procurement, Production, and Scheduling teams. Much of my work focused on building data-driven software systems using Python, SQL Server, and modern visualization frameworks. These systems automated operational workflows, integrated data across departments, and provided interactive dashboards used daily by operational teams.

Working within a small technical environment required strong autonomy and full lifecycle ownership of projects. I regularly analyzed operational challenges, designed technical solutions, and implemented applications that became core internal tools. Projects included automation pipelines, OCR-based data extraction systems, warehouse visualization tools, and internal reporting platforms.

I am particularly interested in Helm's mission to deliver reliable software for industries operating in complex real-world environments. I enjoy building practical software systems that support operational decision-making and I am excited by the opportunity to continue expanding my skills in modern full-stack technologies including C#, .NET, TypeScript, and cloud-based systems while contributing to a collaborative engineering team.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my experience building data-driven applications and operational software systems could contribute to the Helm CONNECT platform.

Sincerely,
Avery Briggs
