Dear Hiring Team at Mariner,

I'm writing to express my interest in the Solution Architect role at Mariner. With nearly five years of experience designing, building, and maintaining internal systems in a fast-paced manufacturing environment, I'm excited by the opportunity to contribute to an organization that thrives on solving complex problems, delivering lasting solutions, and empowering people through technology.

At BWS Manufacturing, I've served as an in-house developer responsible for full-stack tool creation—from MS SQL database design to Python-based dashboards and production scheduling apps. My work included architecting internal systems that support everything from IT ticketing to geo-based reporting, often independently gathering requirements and deploying maintainable solutions. This hands-on experience has deepened my technical foundation in Python, SQL Server, Access, and UI frameworks like Streamlit and Tkinter, while reinforcing the importance of clean design and user-centric thinking.

What excites me about Mariner is your emphasis on turning novel ideas into practical outcomes, and your track record of making a difference across industries—from energy to social enterprise. I'm particularly drawn to your focus on building a company that lasts, driven by values like service, innovation, and continuous growth. I see this role as an opportunity to deepen my exposure to cloud architecture, DevOps, and risk-informed decision-making, all while contributing to solutions that have lasting impact.

I'd welcome the chance to bring my practical experience, curiosity, and strong sense of ownership to your team, and to continue learning from the diverse perspectives Mariner fosters. Thank you for considering my application—I hope to connect soon to discuss how I can support your work.

Warm regards,
Avery Briggs
