Dear Hiring Committee,

I am writing to express my interest in the Data Analyst position with Phillips & Cohen Associates.

Over the past five years, I have worked extensively with SQL databases, reporting systems, operational analytics, and business process improvement initiatives within a manufacturing environment. My experience includes developing analytical queries, creating dashboards and reporting tools, investigating data discrepancies, automating reporting processes, and supporting operational decision-making through data-driven analysis.

In my previous role, I was responsible for developing and maintaining SQL-based reporting solutions used across Sales, Procurement, Production, Scheduling, and Operations. My work regularly involved analyzing large datasets, validating data integrity, identifying operational trends, troubleshooting system and reporting issues, and communicating findings to both technical and non-technical stakeholders.

A significant portion of my experience has involved investigating business processes to identify inefficiencies and opportunities for improvement. Through reporting automation, workflow redesign, data validation tools, and operational analytics, I have helped improve reporting accuracy, reduce manual effort, and increase visibility into critical business metrics. These responsibilities required close collaboration with management, operational teams, and technical staff to ensure solutions aligned with business objectives.

While my professional experience has primarily focused on SQL development, reporting, and analytics rather than SAS specifically, I have consistently demonstrated the ability to quickly learn new technologies and apply them effectively to business challenges. My experience working with relational databases, large operational datasets, and reporting systems provides a strong foundation for supporting Phillips & Cohen Associates' dialer and analytics platforms.

The opportunity to combine data analysis, process improvement, troubleshooting, and cross-functional collaboration is particularly appealing to me. I would welcome the opportunity to discuss how my background in analytics, reporting, and operational support could contribute to your team.

Thank you for your consideration.

Sincerely,  
Avery Briggs
