Dear Hiring Manager,

I am excited to apply for the AWS Lambda Developer position with Play Hockey. As a software developer with experience building business applications, databases, automation solutions, and backend systems, I am enthusiastic about the opportunity to contribute to your modern serverless technology environment while supporting an organization dedicated to helping young athletes reach their full potential.

Throughout my career, I have developed and maintained software solutions that support real-world business operations. My experience includes application development using Java, Python, SQL Server, and JavaScript, along with designing databases, automating workflows, integrating systems, troubleshooting production issues, and supporting users. I am comfortable working independently while also collaborating with stakeholders and technical teams to deliver reliable solutions.

What particularly interests me about this opportunity is the focus on cloud-native development using AWS Lambda and related AWS services. While my professional experience has primarily focused on business application development, database systems, automation platforms, and reporting solutions, I have also pursued personal software projects involving REST APIs, data integration, analytics, and modern development practices. These projects have allowed me to continue expanding my development skills while exploring technologies outside my day-to-day responsibilities. I enjoy learning new technologies and have consistently demonstrated the ability to quickly adapt to new tools and environments throughout my career.

In addition to my technical background, I bring strong problem-solving skills, attention to detail, and a commitment to producing maintainable, secure, and well-documented solutions. I would welcome the opportunity to contribute these strengths while continuing to expand my expertise in AWS serverless technologies.

As a lifelong hockey fan, I have also developed personal software projects utilizing NHL data APIs, analytics, and visualization tools. The opportunity to combine my software development background with an organization focused on the game is particularly appealing.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my development experience, technical aptitude, and enthusiasm for learning can contribute to the continued success of Play Hockey.

Sincerely,

Avery Briggs
