Dear Hiring Manager,

I am writing to express my interest in the Data Centre Analyst position with Service New Brunswick.

With a Bachelor of Computer Science and more than five years of experience supporting business-critical systems in a manufacturing environment, I have developed a strong foundation in infrastructure support, troubleshooting, vendor coordination, documentation, and operational technology support.

In my previous role with BWS Manufacturing, I supported a wide range of systems used throughout the organization, including ERP, database, reporting, and operational platforms. I regularly worked with external technology providers responsible for networking, cloud services, backups, telecommunications, and security systems, helping coordinate projects, resolve technical issues, and ensure reliable day-to-day operation of business systems.

Although my background has included software and database development, a significant portion of my role has focused on operational support, system reliability, problem resolution, and infrastructure-related initiatives. Working within a small technical team has required me to take ownership of issues from investigation through resolution while maintaining documentation and supporting users across multiple departments.

I am particularly interested in this opportunity because it offers the chance to work directly with enterprise infrastructure while continuing to build my knowledge of data centre operations. My experience learning and supporting a wide variety of technologies, combined with my analytical approach and commitment to customer service, would allow me to contribute effectively to the Technology Services Division.

I would welcome the opportunity to discuss how my background and experience can support Service New Brunswick's data centre operations and ongoing technology initiatives.

Thank you for your time and consideration.

Sincerely,
Avery Briggs
