Dear Hiring Manager,

I am excited to apply for the Data Quality Specialist position with Zapyrus at Lumerate.

Over the past five years, I have worked at the intersection of data, software, and operations, building tools that validate, transform, and extract insights from complex datasets. In my role as a systems and database developer in a manufacturing environment, a significant portion of my work focused on ensuring data accuracy across inventory, procurement, and production systems—often requiring investigation across multiple data sources to identify inconsistencies and uncover root causes.

I have extensive experience analyzing structured and semi-structured data using SQL and Python, as well as developing processes to clean, validate, and enrich datasets. For example, I built OCR-based pipelines to extract structured data from legacy PDF reports, enabling automated analysis of previously inaccessible information. I also routinely performed cross-referencing between systems to ensure consistency and reliability of operational data, improving decision-making across departments.

I am particularly interested in this role because of its focus on discovering and organizing information. I enjoy the process of researching new data sources, identifying meaningful patterns, and structuring information so that it becomes actionable. My work has required strong reading comprehension and attention to detail, especially when interpreting inconsistent or incomplete data.

Additionally, I have been actively exploring the use of LLMs for data extraction, classification, and summarization workflows, including structuring unstructured text into usable datasets. I also enjoy identifying and evaluating new data sources, ensuring their relevance, accuracy, and usefulness within structured datasets. I am very interested in applying these tools in a structured and production-oriented environment like Zapyrus.

I am comfortable working independently, managing multi-step processes, and maintaining a high standard of quality in recurring workflows. I am also highly motivated by learning and would be excited to contribute to a growing product at the intersection of software and data intelligence.

mastercard

Thank you for your time and consideration. I would welcome the opportunity to contribute to your team.

Sincerely,
Avery Briggs

Professional Summary

Data-focused systems analyst with 5+ years of experience validating, transforming, and analyzing complex datasets across operational systems. Skilled in SQL, Python, and data workflows involving extraction, cleaning, and cross-referencing of structured and semi-structured data. Experienced in identifying inconsistencies, improving data quality, and building tools that generate actionable insights. Strong attention to detail, high reading comprehension, and a curiosity-driven approach to uncovering meaningful information.

Experience

Data Systems Analyst / Database Developer

BWS Manufacturing Ltd. | Centreville, N.B. (Jan 2021 – Feb 2026)

Developed internal software systems and software development tools supporting operational workflows across Sales, Procurement, Production, and Scheduling within a small technical team in a manufacturing environment.

Key Contributions

- Validated and analyzed operational datasets across inventory, procurement, and production systems to ensure consistency and accuracy across multiple data sources.
- Developed SQL queries and Python workflows to identify anomalies, inconsistencies, and trends in large datasets.
- Built data processing pipelines to extract structured information from semi-structured sources, including OCR-based parsing of legacy PDF reports.
- Cross-referenced data between ERP systems and internal tools to reconcile discrepancies and improve data integrity.
- Designed and maintained recurring data processes and reporting workflows used across multiple departments.
- Created tools to transform raw data into structured, actionable insights for business users.
- Investigated data issues by tracing inconsistencies across systems and historical records.
- Collaborated with stakeholders to interpret business requirements and translate them into structured data solutions.
- Applied heuristic and rule-based logic to validate and flag inconsistent or incomplete data entries.

Relevant Data Experience

- Experience working with large, multi-source datasets requiring validation and reconciliation.
- Strong reading comprehension when analyzing technical, semi-structured, and unstructured data sources.
- Experience using LLMs and OCR tools to extract and structure information.
- Comfortable working with ambiguous data inputs and making decisions with incomplete information.
- High attention to detail in repetitive and process-driven workflows.

Notable Projects:

- IT Request and Inventory Ticketing System. Built from scratch using SQL and Access.
- Developed an Access macro and VBA workflow to automate batch report generation, triggered from a Python/Streamlit dashboard. Implemented timestamp validation and fault-tolerant logic to ensure reliable generation of up to 50 reports per execution.
- Yellow Tag system to automatically flag, record, and report missed parts when picked for production. Offers a variance reconciliation opportunity earlier in the production pipeline, highlighting common trends. Front-end built using an automatically refreshing form presenting live Syspro Data.
- PDF parsing of legacy reports using Python and modules: Pdfplumber, Streamlit, and Pytesseract.
- 3D warehouse visualization using Plotly, demonstrating bottlenecks and improving transparency.

Technologies used:

- Microsoft Excel, Access, VBA, SQL Server, Syspro8 ERP, ShopClock, Python, Streamlit, Pandas, Plotly, Pytesseract, Reportlab, CustomTkinter, NeWare Security.

Other Job Experience:

- Basketball Referee – CBOC – Fredericton, NB – Oct 2013 – Mar 2020.

Education

Bachelor of Computer Science

UNB – Fredericton N.B. (May 2020)

- Specialization: Software Systems.
- Recipient of Governor Thomas Carleton Entry Scholarship.

Skills

- **Languages:** English (native), French (Intermediate professional proficiency).
- **Data & Analysis:** SQL, Python (Pandas), Data Validation, Data Cleaning, Streamlit modeling.
- **Data Extraction:** OCR (Pytesseract), PDF Parsing (pdfplumber).
- **Databases:** Microsoft Excel & Access, Microsoft SQL Server.
- **Tools:** Git, Syspro ERP, ShopClock.

Awards & Activities

- Finalist (Top 12) - Kaspersky Academy Partner's Summit (KAPS) Lisbon, Portugal (December 2019).
- Certified intermediate plus in the French oral proficiency exam (June 2013).
- UNB dormitory Orientation Committee (September 2014) & Social Representative (September 2014 – April 2015).
- UNB Relay for Life steering committee logistics team (September 2013 – February 2014).

Hobbies

3D printing and hardware projects, sports analytics software, recreational athletics (cycling, kayaking, basketball officiating).

Projects

- NHL data analysis dashboard displaying real-time game data and standings using the NHL Stats API.
- STL file generation for automating the creation of strings of text using custom fonts and other parameters. Uses a Solid2 to generate files, and Streamlit interface to model and tweak them.
- Minesweeper Android mobile application, built using Java and Android Studio.
- Image editing Android application taking advantage of the Gestures library to offer a unique interface for tuning photos.
- Traffic simulation engine using Pygame. Mimics some elements from Cities Skylines traffic patterns.
- COVID-19 interaction simulator built with JavaFX modeling contagion spread in configurable populations.
