Dear Hiring Manager,

I am excited to apply for the Data Quality Specialist position with Zapyrus at Lumerate.

Over the past five years, I have worked at the intersection of data, software, and operations, building tools that validate, transform, and extract insights from complex datasets. In my role as a systems and database developer in a manufacturing environment, a significant portion of my work focused on ensuring data accuracy across inventory, procurement, and production systems—often requiring investigation across multiple data sources to identify inconsistencies and uncover root causes.

I have extensive experience analyzing structured and semi-structured data using SQL and Python, as well as developing processes to clean, validate, and enrich datasets. For example, I built OCR-based pipelines to extract structured data from legacy PDF reports, enabling automated analysis of previously inaccessible information. I also routinely performed cross-referencing between systems to ensure consistency and reliability of operational data, improving decision-making across departments.

I am particularly interested in this role because of its focus on discovering and organizing information. I enjoy the process of researching new data sources, identifying meaningful patterns, and structuring information so that it becomes actionable. My work has required strong reading comprehension and attention to detail, especially when interpreting inconsistent or incomplete data.

Additionally, I have been actively exploring the use of LLMs for data extraction, classification, and summarization workflows, including structuring unstructured text into usable datasets. I also enjoy identifying and evaluating new data sources, ensuring their relevance, accuracy, and usefulness within structured datasets. I am very interested in applying these tools in a structured and production-oriented environment like Zapyrus.

I am comfortable working independently, managing multi-step processes, and maintaining a high standard of quality in recurring workflows. I am also highly motivated by learning and would be excited to contribute to a growing product at the intersection of software and data intelligence.

mastercard

Thank you for your time and consideration. I would welcome the opportunity to contribute to your team.

Sincerely,
Avery Briggs
