Dear Outlier AI Team,

I am writing to express my interest in the Full Stack Software Engineer Expert role for AI Training. The opportunity to evaluate code quality, analyze software engineering practices, and contribute to improving AI-generated outputs strongly aligns with my professional experience and interests.

I hold a Bachelor of Computer Science from the University of New Brunswick and have over three years of experience building and maintaining production-grade software systems in a manufacturing environment. In my role as a Software Systems Developer and Process Analyst at BWS Manufacturing, I developed full-stack internal tools using Python, SQL Server, and modern UI frameworks such as Streamlit. These tools supported operational workflows across procurement, production, inventory, and sales.

A significant portion of my work involved debugging complex issues, analyzing system behavior, and ensuring data integrity across interconnected systems. I regularly evaluated code quality, refactored legacy applications, and implemented structured solutions to improve maintainability and performance. This included consolidating multiple Access-based systems, developing OCR pipelines for unstructured data extraction, and designing interactive dashboards for operational analysis.

I am particularly drawn to this role's focus on reviewing and improving AI-generated code. My experience working across multiple technologies—including Python, SQL, VBA, and Java—has given me a strong foundation in identifying edge cases, enforcing best practices, and communicating technical feedback clearly and effectively. I am comfortable working independently with detailed guidelines and enjoy applying structured reasoning to technical evaluation tasks.

This opportunity represents a compelling intersection of software engineering and emerging AI systems, and I would welcome the chance to contribute to improving model quality through expert analysis and feedback.

Thank you for your time and consideration.

Sincerely,
Avery Briggs
