Dear Hiring Manager,

I am writing to express my interest in the IT Systems Analyst position with Medavie.

Over the past five years, I have worked as a Systems Analyst and Database Developer in a manufacturing environment, where I have been responsible for maintaining, troubleshooting, and continuously improving business-critical systems supporting operations across multiple departments. My role has required a high degree of ownership, working with incomplete documentation and complex system interactions to diagnose issues, implement solutions, and support end users—closely aligning with the responsibilities outlined for this position.

In my current role, I administer and support Microsoft Access and SQL Server-based systems integrated with ERP platforms. I regularly investigate production issues using data analysis, system behavior, and direct collaboration with stakeholders to identify root causes and implement reliable solutions. This includes debugging queries and application logic, improving performance, and ensuring data integrity across systems.

A key aspect of my work involves acting as a liaison between technical systems and business users. I collaborate with stakeholders to gather requirements, translate technical findings into actionable insights, and deliver enhancements that improve system usability and operational efficiency. I am comfortable managing multiple priorities, including ongoing support, incident resolution, and system improvements in a live high-availability production environment.

While my experience is primarily within the Microsoft ecosystem, I have developed a strong foundation in database systems, scripting, and system integration, and I have a proven ability to quickly learn and adapt to new systems and technologies, including Oracle, PL/SQL, and legacy environments.

I am particularly interested in this role because of Medavie's focus on improving healthcare services for Canadians. The opportunity to apply my systems analysis and troubleshooting skills in a mission-critical environment is highly motivating.

Thank you for your consideration. I would welcome the opportunity to discuss how my experience can contribute to your team.

Sincerely,
Avery Briggs

Professional Summary

Systems Analyst with 5+ years of experience supporting, troubleshooting, and enhancing business-critical and legacy systems in a production environment. Experienced in diagnosing complex system issues using data analysis, system behavior, and stakeholder collaboration. Strong background in database systems, performance optimization, and process improvement. Proven ability to work with incomplete documentation, manage competing priorities, and deliver reliable solutions across integrated systems.

Experience

Systems Analyst / Database Developer

BWS Manufacturing Ltd. | Centreville, N.B. (Jan 2021 – Feb 2026)

Developed internal software systems and software development tools supporting operational workflows across Sales, Procurement, Production, and Scheduling within a small technical team in a manufacturing environment.

Key Contributions

- Investigated and resolved system issues using logs, data analysis, query debugging, and system behavior across integrated ERP and database systems.
- Monitored system performance and implemented improvements to enhance reliability, data integrity, and usability.
- Acted as a liaison between business stakeholders and technical systems, gathering requirements and translating them into practical solutions.
- Took ownership of production issues, managing incident resolution from identification through to resolution and follow-up, troubleshooting user-reported issues, and implementing enhancements.
- Worked with large, multi-source datasets to validate data accuracy and identify inconsistencies across systems.
- Participated in system testing, deployment, and post-release support to ensure stability in live environments.
- Developed and maintained documentation for systems, processes, and troubleshooting procedures.
- Built automation and reporting solutions using SQL, Python, and VBA to improve efficiency and reduce manual processes.

Systems & Technical Environment

- **Languages:** English (native), French (Intermediate professional proficiency).
- **Databases:** Microsoft SQL Server, Microsoft Access (relational design, query optimization, indexing concepts).
- **Programming:** SQL, Python, VBA.
- **Systems:** ERP (Syspro), ShopClock, integrated operational systems.
- **Analysis:** Data validation, root cause analysis, performance troubleshooting.
- **Integration:** APIs, data pipelines, cross-system data synchronization.
- **Tools:** Git, Excel, Access, reporting and visualization tools.
- **Concepts:** SDLC (Agile / iterative development environments), production support, incident management.

Notable Projects:

- IT Request and Inventory Ticketing System. Built from scratch using SQL and Access.
- Developed an Access macro and VBA workflow to automate batch report generation, triggered from a Python/Streamlit dashboard. Implemented timestamp validation and fault-tolerant logic to ensure reliable generation of up to 50 reports per execution.
- Yellow Tag system to automatically flag, record, and report missed parts when picked for production. Offers a variance reconciliation opportunity earlier in the production pipeline, highlighting common trends. Front-end built using an automatically refreshing form presenting live Syspro Data.
- PDF parsing of legacy reports using Python and modules: Pdfplumber, Streamlit, and Pytesseract.
- 3D warehouse visualization using Plotly, demonstrating bottlenecks and improving transparency.

Technologies used:

- Microsoft Excel, Access, VBA, SQL Server, Syspro8 ERP, ShopClock, Python, Streamlit, Pandas, Plotly, Pytesseract, Reportlab, CustomTkinter, NeWare Security.

Other Job Experience:

- Basketball Referee – CBOC – Fredericton, NB – Oct 2013 – Mar 2020 – Part-time.

Education

Bachelor of Computer Science

UNB – Fredericton N.B. (Sept 2017 – May 2020)

- Specialization: Software Systems.
- Recipient of Governor Thomas Carleton Entry Scholarship.

Skills

- Systems Analysis & Troubleshooting
- Database Performance & Query Optimization
- Root Cause Analysis & Debugging
- Stakeholder Communication & Requirements Gathering
- Production Support & Incident Resolution
- Data Integration & Automation
- Documentation & Process Standardization

Awards & Activities

- Finalist (Top 12) - Kaspersky Academy Partner's Summit (KAPS) Lisbon, Portugal (December 2019).
- Certified intermediate plus in the French oral proficiency exam (June 2013).
- UNB dormitory Orientation Committee (September 2014) & Social Representative (September 2014 – April 2015).
- UNB Relay for Life steering committee logistics team (September 2013 – February 2014).

Hobbies

3D printing and hardware projects, sports analytics software, recreational athletics (cycling, kayaking, basketball officiating).

Projects

- NHL data analysis dashboard displaying real-time game data and standings using the NHL Stats API.
- STL file generation for automating the creation of strings of text using custom fonts and other parameters. Uses a Solid2 to generate files, and Streamlit interface to model and tweak them.
- Minesweeper Android mobile application, built using Java and Android Studio.
- Image editing Android application taking advantage of the Gestures library to offer a unique interface for tuning photos.
- Traffic simulation engine using Pygame. Mimics some elements from Cities Skylines traffic patterns.
- COVID-19 interaction simulator built with JavaFX modeling contagion spread in configurable populations.
