Dear Hiring Manager,

I am excited to apply for the Reporting & Analytics Specialist position at McCain Foods.

Over the past five years, I have worked in a data-focused systems role where I regularly fulfilled internal reporting needs by extracting, validating, and analyzing data across multiple operational systems. My experience includes responding to stakeholder requests, building recurring reporting workflows, and ensuring data accuracy across inventory, procurement, and production datasets.

In my role at BWS Manufacturing, I frequently translated business questions into structured data outputs—delivering reports, dashboards, and ad-hoc analysis used by multiple departments. This often required cross-referencing data between systems, identifying inconsistencies, and ensuring results were both accurate and meaningful. I also developed processes to improve reporting reliability and reduce manual effort, helping teams access data more efficiently.

I am particularly drawn to this role's focus on service delivery and stakeholder support. I am comfortable managing multiple requests, communicating with users to clarify requirements, and ensuring outputs meet both business needs and data governance expectations. My experience working with sensitive operational data has reinforced the importance of accuracy, discretion, and structured processes.

Technically, I bring strong experience with SQL, Excel, and Python for data analysis and reporting workflows. I have also built automated data pipelines and reporting tools that support recurring business needs and improve decision-making.

I am highly motivated by opportunities to improve how organizations use data, and I would welcome the opportunity to contribute to McCain's reporting and analytics team, supporting HR data and decision-making.

Thank you for your time and consideration.

Sincerely,
Avery Briggs
