Dear Hiring Manager,

I am writing to express my interest in the Senior System Analyst position with Service New Brunswick's Health Services Division.

Over the past five years, I have worked as a Software Systems and Database Developer at BWS Manufacturing, where I have been responsible for designing, maintaining, and continuously improving database-driven systems that support operational workflows across multiple departments. My work has focused heavily on system reliability, data integrity, and user adoption—areas that closely align with the responsibilities of supporting and advancing a province-wide CMMS.

In my current role, I administer and enhance Microsoft Access and SQL Server-based systems used for inventory tracking, reporting, and operational coordination. This includes monitoring system performance, troubleshooting issues, supporting end users, and implementing enhancements based on evolving business needs. I regularly collaborate with stakeholders across departments to gather requirements, identify gaps, and deliver practical, maintainable solutions.

A key part of my work involves integrating systems and automating workflows using SQL, VBA, and Python, as well as developing reporting tools and data visualizations to support decision-making. I have also contributed to system standardization and documentation, helping ensure consistency, reliability, and ease of use for a wide range of users.

I am particularly interested in this role because of its focus on supporting healthcare technology and improving service delivery for New Brunswickers. I am motivated by opportunities where my technical and analytical skills can contribute to meaningful, real-world impact.

I am fully bilingual (English and French – intermediate professional proficiency) and comfortable working collaboratively in team environments while also managing independent responsibilities.

Thank you for your consideration. I would welcome the opportunity to discuss how my experience in systems analysis, database administration, and stakeholder support can contribute to the continued success of Service New Brunswick.

Sincerely,
Avery Briggs

Professional Summary

Systems Analyst and Database Developer with 5+ years of experience supporting, maintaining, and improving database-driven operational systems. Experienced in system administration, performance monitoring, user support, and data integration using Microsoft Access, SQL Server, and Python. Proven ability to analyze business needs, troubleshoot system issues, and deliver scalable solutions that improve data quality, reporting, and operational efficiency. Strong collaborator with experience working across teams to support system adoption and continuous improvement.

Experience

Systems Analyst / Database Developer

BWS Manufacturing Ltd. | Centreville, N.B. (Jan 2021 – Feb 2026)

Developed internal software systems and software development tools supporting operational workflows across Sales, Procurement, Production, and Scheduling within a small technical team in a manufacturing environment.

Key Contributions

- Owned and administered internal database systems supporting operational workflows across multiple departments (**CMMS-equivalent operational systems**).
- Monitored system performance, investigated issues, and implemented solutions to improve reliability and data accuracy.
- Provided user support by troubleshooting issues, responding to inquiries, and improving system usability.
- Collaborated with stakeholders to gather requirements, identify system gaps, and propose enhancements.
- Coordinated testing and deployment of system updates, ensuring stability and minimal disruption to operations.
- Developed and maintained system documentation, standards, and procedures to support consistent usage.
- Integrated data across systems using SQL, Python, and APIs to improve reporting, accessibility, and decision-making.
- Designed and evolved system structures and data models to support scalability and long-term maintainability.

Systems Analysis & Reporting

- Developed and delivered ad-hoc and recurring reports based on stakeholder requests.
- Experience working with large, multi-source datasets requiring validation and reconciliation.
- Strong proficiency in SQL and advanced Excel for data extraction and analysis.
- Experience designing data outputs that are clear, structured, and actionable.
- Comfortable working with sensitive or business-critical data requiring accuracy and discretion.
- Experience improving reporting processes and enabling self-service data access where possible.

Notable Projects:

- IT Request and Inventory Ticketing System. Built from scratch using SQL and Access.
- Developed an Access macro and VBA workflow to automate batch report generation, triggered from a Python/Streamlit dashboard. Implemented timestamp validation and fault-tolerant logic to ensure reliable generation of up to 50 reports per execution.
- Yellow Tag system to automatically flag, record, and report missed parts when picked for production. Offers a variance reconciliation opportunity earlier in the production pipeline, highlighting common trends. Front-end built using an automatically refreshing form presenting live Syspro Data.
- PDF parsing of legacy reports using Python and modules: Pdfplumber, Streamlit, and Pytesseract.
- 3D warehouse visualization using Plotly, demonstrating bottlenecks and improving transparency.

Technologies used:

- Microsoft Excel, Access, VBA, SQL Server, Syspro8 ERP, ShopClock, Python, Streamlit, Pandas, Plotly, Pytesseract, Reportlab, CustomTkinter, NeWare Security.

Other Job Experience:

- Basketball Referee – CBOC – Fredericton, NB – Oct 2013 – Mar 2020 – Part-time.
- Kitchen Staff – FMI – Fredericton, NB, -- May 2015 – Sept 2017 – Part & full-time.
- Farm Hand – Hunter Brother's Farm Market – Florenceville, NB, -- Jun 2011 – Aug 2013 – Seasonal full-time.

Education

Bachelor of Computer Science

UNB – Fredericton N.B. (Sept 2017 – May 2020)

- Specialization: Software Systems.
- Recipient of Governor Thomas Carleton Entry Scholarship.

Skills

- **Languages:** English (native), French (Intermediate professional proficiency).
- **Data & Analysis:** SQL, Python (Pandas), Data Validation, Data Cleaning, Streamlit modeling.
- **Data Extraction:** OCR (Pytesseract), PDF Parsing (pdfplumber).
- **Reporting:** SQL queries, data analysis, visualization (Streamlit, Plotly, Reportlab, among other tools)
- **Integration:** APIs, Python automation, data pipelines
- **Databases:** Microsoft Excel & Access, Microsoft SQL Server.
- **Tools:** Git, Syspro ERP, ShopClock.

Awards & Activities

- Finalist (Top 12) - Kaspersky Academy Partner's Summit (KAPS) Lisbon, Portugal (December 2019).
- Certified intermediate plus in the French oral proficiency exam (June 2013).
- UNB dormitory Orientation Committee (September 2014) & Social Representative (September 2014 – April 2015).
- UNB Relay for Life steering committee logistics team (September 2013 – February 2014).

Hobbies

3D printing and hardware projects, sports analytics software, recreational athletics (cycling, kayaking, basketball officiating).

Projects

- NHL data analysis dashboard displaying real-time game data and standings using the NHL Stats API.
- STL file generation for automating the creation of strings of text using custom fonts and other parameters. Uses a Solid2 to generate files, and Streamlit interface to model and tweak them.
- Minesweeper Android mobile application, built using Java and Android Studio.
- Image editing Android application taking advantage of the Gestures library to offer a unique interface for tuning photos.
- Traffic simulation engine using Pygame. Mimics some elements from Cities Skylines traffic patterns.
- COVID-19 interaction simulator built with JavaFX modeling contagion spread in configurable populations.
